

BUSINESS SOFTWARE · INTEGRATION · MANAGED CLOUD

We know technology. **We build it around your business.**

Custom business software since 2001. Five connected products, tailored development, systems integration and managed cloud — one platform that runs the routine while your people run the business.

Your company runs on work nobody chose.

An order arrives by email and gets retyped into the management system. Three calendars are checked to book one appointment. The same customer lives in four applications, spelled three ways. Every Monday, someone rebuilds the same report.

None of this is in anyone's job description — yet it fills the working day. When applications don't talk to each other, **people become the integration**: they move information by hand, chase confirmations, and hold processes together with spreadsheets and memory.

The cost is quiet and constant. Hours that should go to customers go to copying and checking. Errors slip in between systems. And because the numbers arrive late, decisions do too.

Time spent moving information is time not spent moving the business.

Where the day goes

- Manual re-entry between applications
- Tools that don't talk to each other
- Spreadsheets holding processes together
- Documents that stop between quotation and payment
- Reports rebuilt by hand, week after week
- Numbers too old to act on

Software adapts to your business. Not the other way around.

Since 2001 we have built management software and integrations for European companies. We've learned that the software is never the starting point — the business is.

So we begin with the way you work: who does what, where time is lost, which data is copied by hand, which systems stay silent. Understanding that first lets us focus change where it creates real value — then we shape the platform around it, and keep shaping it as your company changes.

We don't force your company to adapt to rigid software. We build the technology to fit the company you actually run.

“Automating everyday work to give time back to people and create value for businesses.”

Our mission

Custom business software since 2001 — one joined-up team across applications, integrations and cloud, from Sassari, Olbia and Dublin.

How that works in practice

01

Listen

We speak with the people using the system and map the real work.

02

Design

We agree priorities, integrations and a sustainable path.

03

Build

We release in stages and check each choice with the team.

04

Stay

We keep the system moving as the company, rules or volumes change.

A digital team member, built around you.

Every business runs on work nobody chose. Business Autopilot is our answer.

One platform where people, processes, applications and data stay connected — so the routine runs on its own rails, under your rules and in plain sight. Orders become documents, documents become schedules, schedules become invoices, invoices become numbers on a dashboard — without anyone copying anything in between.

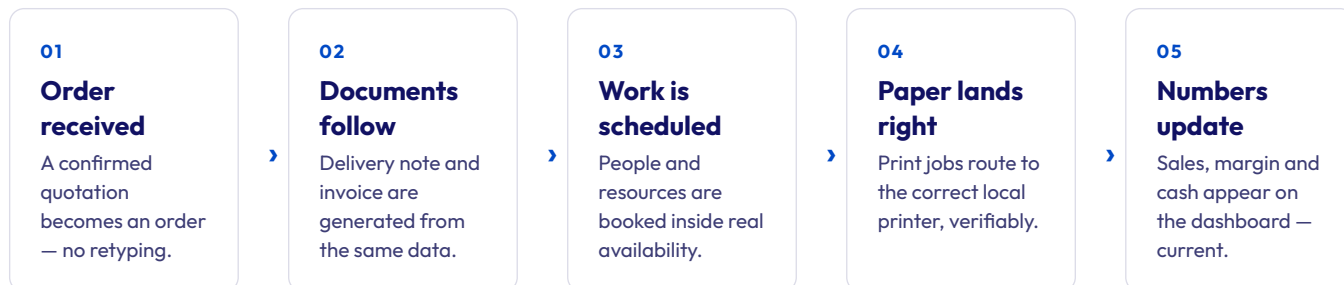

An autopilot doesn't replace the pilot. It holds the course so the pilot can concentrate on judgement. That is the standard we build to: **the platform coordinates and automates the operational work; your team keeps full visibility and keeps the decisions.**

**You stay the pilot.
The platform holds the course.**

We're building toward a future where every business has its own digital co-pilot — systems that handle operational work while entrepreneurs focus on customers, people and opportunities.

The routine, on rails

One example, end to end — five steps that used to be five hand-offs:

Five steps. Zero hand-offs. Full visibility at every point — and every rule is yours to set.

People · Processes · Applications · Data

01

Less manual work

Repetitive entry and hand-offs move to the platform. People stop being the glue between systems.

02

Coordinated operations

Work follows agreed steps and statuses — visible to everyone who needs to see them.

03

Connected data and tools

One shared base of customers, documents and numbers across every application.

04

Better-informed decisions

Current figures where decisions are made — not rebuilt at month-end.

Five products. One platform. Your rules.

Each product stands on its own. Together they share one platform — the same users, the same rules, the same data — so an order can become a project, a schedule, an invoice, a printed document and a number on the dashboard without anyone copying anything.

Nebulas ERP

From first contact to payment. Without losing the thread.

Sales, purchasing, documents, e-invoicing, inventory, payments, analytics and projects in one connected flow — following the real rules of your business.

DOCUMENTS · E-INVOICING · INVENTORY · CONTROL

Nebulas Projects

From project brief to outcome. Keep every project readable.

Portfolios, WBS plans, timelines, operational boards and timesheets connect project control with actual delivery — and with recorded hours.

PORTFOLIO · WBS · BOARDS · TIMESHEETS

Nebulas Calendar

Every commitment, resource and availability. In one view.

People, resources and appointments across multiple calendars — working hours, bookable slots, recurrence and notifications, always with business context.

AVAILABILITY · RESOURCES · NOTIFICATIONS

Nebulas Analytics

Turn operational data into decisions, in one dashboard.

Shared operational data becomes clear measures — sales, profitability, finance, customers, inventory and operations, with previous-period comparison built in.

KPI · PROFITABILITY · CONTROL

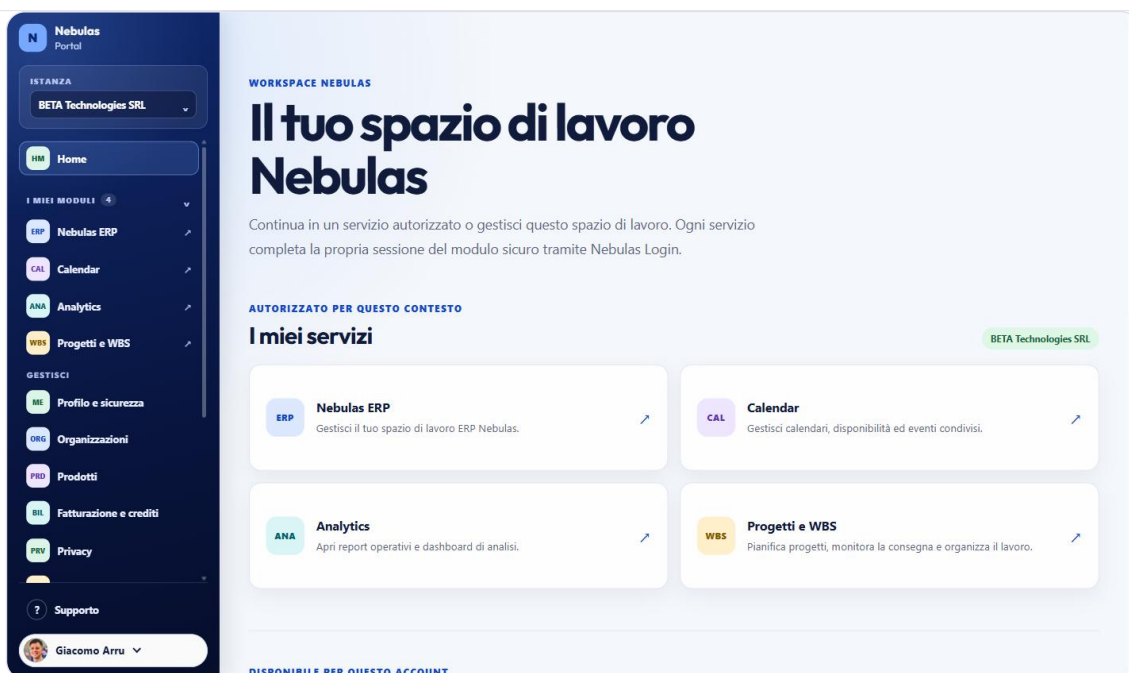

Nebulas Cloud Printing

From the cloud to the right printer. No manual hand-offs.

PDFs travel from cloud software to the correct local queue through an authorised client — exact routing, protected jobs, and a verifiable printed-or-failed result.

ROUTING · SECURITY · STATUS

The Nebulas workspace — one login, every authorised module: ERP, Calendar, Analytics, Projects & WBS.

One shared foundation

Same users and roles. Same customers and documents. Same rules. **Start with one workflow and expand after it proves itself** — each product stands alone, and gets stronger together.

When standard isn't enough, we build the difference.

Most companies don't struggle with software because a feature is missing. They struggle at the joints — where one system ends and another begins. That is where we do our best work.

01

Custom software

ERP, CRM and operations software developed around your processes — from adapted modules to complete tailored applications, released in stages and checked with your team.

02

Systems that work together

Integration, data and automation. We connect the platform with the systems you already use — where they expose usable interfaces, with feasibility confirmed during discovery, not after signature.

03

Managed cloud

We design and run secure, observable and sustainable AWS environments — foundations, security and compliance, monitoring, backup and recovery, patching and cost control. Your team keeps visibility and decision-making power.

Also available: Managed Nextcloud — migration, security, custom apps, ERP/CRM integration.

BUILDING SINCE

5

CONNECTED PRODUCTS

3

OFFICES IN EUROPE

5

LANGUAGES

First we understand the process. Then we write the software.

The project stays practical: the people involved, the data available, the steps to simplify and the results to check.

Start small, prove it

Begin with one priority workflow. Validate it in real work, then expand — the platform grows module by module, not by big bang.

Feasibility before promises

Integrations with your existing systems are assessed during discovery — so the plan you approve is a plan that works.

A written quote, always

Indicative pricing is public on our site; the final price is always confirmed in a written quote before we start.

We don't disappear after launch

Releases are checked with your team, and the system keeps evolving with its users — with weekday support, Monday to Friday, 9:00–17:00.

One joined-up team

Applications, integrations and cloud infrastructure from a single point of contact. No hand-offs between vendors, no gaps between responsibilities — one team that knows your platform end to end.

Chosen for the way we work.

Built around your business

We start from your processes and shape the platform to fit — not the other way around. Since 2001.

One accountable team

Software, integrations and cloud infrastructure — one point of contact for all of it.

European by design

B2B only, European market, GDPR-conscious operations — from Sassari, Olbia and Dublin, in five languages.

One connected platform

Five products sharing users, rules and data. No parallel truths, no copy-paste between tools.

Present after launch

Staged releases checked with your team; the system keeps moving as your company changes.

Honest by default

Public indicative pricing, written quotes, feasibility confirmed in discovery — commitments we can keep.

“These people understand how businesses actually work — and they make complex operations simpler.”

The reaction we build for.

TALK TO US

Tell us how your company works.

In one conversation we'll map where your time goes — and show you what Business Autopilot could take off your team's hands.
